Study programme:

Master of Science Industry 4.0 & Management

Why study Master of Science Industry 4.0 & Management?

The economy is becoming increasingly digital and networked. The intelligent linking of IT and business management systems enables a more flexible, individual, and efficient production as well as an optimization of the entire value chain. The goal of a more flexible production through networking goes hand in hand with ever shorter product cycles, improved business models and a digitalized value-added network.

The core elements of an Industry 4.0 are automation, standardization, digitization, and networking as well as the merging of hardware and software.

In order to implement "Industry 4.0", companies are dependent on specialized professionals who have both business management expertise and comprehensive skills in dealing with the key technologies of Industry 4.0. With "Industry 4.0 & Management", FOM has developed a future-oriented Master's

programme whose contents are specifically geared to these requirements. You will acquire both business expertise and management skills as well as sound specialist knowledge of the digital transformation of classic, industrial processes. In this way, you will prepare yourself for a wide range of possible applications in the context of Industry 4.0 and qualify for demanding positions and management tasks in nationally and internationally operating companies across all industries.

Studying Online

Borders are hardly relevant any more - neither for teaching nor for you and your fellow students, who can connect and join in discussions from anywhere. The online study programs are for students who do not want to leave their home country but still seek for an international degree. Since these programs are part time, students can continue to follow their (professional) life at home.

The basis of FOM's digital live studies are fixed-schedule courses in the form of interactive live broadcasts. The live lectures consist of a mixture of theoretical knowledge transfer and practical elements, such as exercises or case studies. In order to deepen the theoretical knowledge and apply it practically, the students work on questions and exercises, for example in breakout sessions.

FOM University

Having more than 57,000 students, FOM is one of the largest universities in Europe. It was founded as an initiative of the non-profit Stiftung BildungsCentrum der Wirtschaft (Foundation for the Centre of Education for Trade and Industry) and has university centres in 35 cities in Germany as well as in Vienna, Austria. In addition, since the winter semester 2021, the university has been offering digital live studies, which are broadcasted from multifunctional FOM Studios.

As a practically oriented university for professionals, the FOM promotes the transfer of knowledge between the university and business. It is in close contact with over 1,000 cooperating partners, including medium-sized regional companies and major international corporations like BMW, Siemens, Thyssen-Krupp, chambers and business associations. Many of their representatives are involved in the university's committees, provide important impulses for the development of new courses of study, and are sometimes even active in teaching. Students benefit from this practical orientation and are best prepared for the job market after graduation. At the same time, studying at FOM is a good way to expand their professional network.

KEY FACTS

Language

English

Time model

part-time (afternoon/evenings)

Duration

5 semesters including thesis

Place of study

Online

Credit Points

120 ECTS

Fees

Registration fee: 1.580 €, Tuition fee: 13.570 €, Examination fee: 350 €, **Total cost: 15.500 €**
